Q&A from MeSH Webinar 5: Strengthening routine HIV surveillance through strategic information guidelines and digital tools

Really enjoyed your presentation Shona and we look forward to sharing your presentation with colleagues and synthesising learnings across the 5 webinars in this series and sharing these via LSHTM/MeSH networks – so to my somewhat broad question……Do you foresee a world where we will be able to drop the word "aggregate" altogether in relation to HIV data guidance? By Brian Rice
Answered live.

Possibly a slightly unfair question (sorry), what do you think is the main barrier we need to overcome to achieve something we have known to be important for a while now, namely accurately and routinely monitoring HIV in the context of comorbidities? By Brian Rice

Thank you for a great presentation Shona - apologies if I missed this, distracted by door! How can we monitor key populations accurately in relation to the data approach you presented? And how can we use routine HIV data to enhance our understanding of syndemic interactions? By Mitzy Gafos
